

Matthew Bernstein

New York City, NY | 516.509.8364 | mbernstein663@gmail.com | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Data science graduate with experience building risk models, forecasting systems, ETL workflows, analytics dashboards, and production-facing APIs in finance and decentralized AI environments. Proficient in Python, SQL, R, machine learning, and end-to-end data pipelines, with strengths in predictive modeling, model evaluation, and data-driven decision systems.

EDUCATION

University of Connecticut, The Graduate School | M.S. in Data Science, Summer Capstone | Aug 2025 - Jul 2026 | GPA: 3.7/4.0

Relevant Coursework: Machine Learning, Advanced Deep Learning, Applied Time Series, Applied Statistics, Data Mining

University of Connecticut | B.A. in Applied Mathematical Sciences, Analytics Minor | Aug 2021 - May 2025 | GPA: 3.9/4.0

Relevant Coursework: Mathematical Statistics I & II, Elementary Stochastic Processes, Database Design & Management, Business Information Systems, Data Visualization

EXPERIENCE

Bittbridge, UConn x Yuma | AI/ML Data Engineer Intern | Storrs, CT | Spring 2026

- Led technical design for a decentralized AI subnet, defining live forecasting architecture, miner submission workflows, validator scoring logic, and model evaluation criteria.
- Designed Supabase schemas and data flows for feature storage, prediction retrieval, scoring, and repeatable experimentation across 80+ graduate students and AI practitioners.
- Built and presented a GCP-based hackathon demo to 40+ data science and AI professionals, integrating blockchain, cloud, database, and machine learning components into a reproducible forecasting environment.

Fidelity Investments | Data Analytics Intern - Tax | Jersey City, NJ | Summer 2025

- Analyzed 2M+ rows of financial transaction, sentiment, and web traffic data using SQL and ETL workflows to identify bottlenecks in frontend tax reporting processes.
- Built automated Power BI dashboards tracking processing volume, associate workload, SLA trends, and exception patterns for tax operations managers.
- Streamlined Excel, SharePoint, and Jira workflows to improve task visibility and communication across 50+ tax representatives.

Fidelity Investments | Data Operations Intern - Tax | Summer 2024

- Integrated and transformed 100k+ rows of tax operations data using Excel Power Query and SQL to support downstream U.S. nonresident tax compliance reporting.
- Validated ETL pipelines and performed audit testing with RPA and data engineering teams, supporting structural integrity in production systems.

PROJECTS

Credit Default Risk API | GitHub

- Built a leakage-controlled LendingClub default-risk pipeline on 1.35M resolved loans, compared four classification models, and selected an isotonic-calibrated histogram gradient boosting model using appropriate evaluation metrics.
- Deployed the model through FastAPI with individual and batch scoring, a static underwriting demo, Docker support, and automated tests; achieved 0.7092 test ROC-AUC and a 0.1463 Brier score.

Bittbridge Miner-Validator Pipeline | GitHub

- Built live forecasting infrastructure that ingests 5-minute electricity load and weather data, stores features in Supabase, and enables validators to score miner predictions.
- Developed scraper, backend API, and model workflows spanning regression, decision trees, RNNs, and LSTMs for robust subnet forecasting.

SKILLS

Languages: Python, R, SQL

Machine Learning & Statistics: scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, regression, classification, time series, model evaluation

Data, APIs & Platforms: Pandas, NumPy, Matplotlib, FastAPI, Docker, Supabase, GitHub, GCP, Power BI, Tableau, Excel, Power Query, SharePoint, Jira
